

# Setup Instructions

Strobelite™ 2-Light Kit  
Style Series: 240

---

## Description:

The Strobelite offers 300 effective-watt seconds of power in a compact self-contained unit allowing the ability to freeze action by using a single powerful “flash” of light. A quick-release plate and built-in umbrella mount allow for attachment of a wide range of accessories.

## Product Contains:

- (2) Strobelite Light Heads
- (2) 43” White Umbrellas
- (2) 6.5’ Light Stands
- (1) Floor-positioning Mat and Guide Card
- (1) Carry Case
- (1) Educational DVD

## Instructions:

Set up the included light stands in your kit by using the tightening knobs found on the base and telescoping pole of your stand. Loosen the tightening knob(s) and raise each telescoping pole to your desired height and then ensure all knobs are securely tightened.

Next locate the tilter bracket of your light head and ensure the locking knob is entirely backed out. Put the tilter bracket on the stud of your light stand and, with the locking knob, secure in place. You should only see a small silver ring at the base of the tilter bracket. If you see the silver stud or the light does not feel secure make sure the locking knob is all the way backed out from the tilter bracket and re attach to the stud of the light stand.

(To remove the protective cap placed on your light head locate the silver release tab on the top of the light head and pull towards the back of the light head while turning the cap to release.)

The last step in this process is to attach the umbrellas. To attach the umbrella start by locating the umbrella receptacle on the top portion of the tilter bracket directly below the base of the light. Open your umbrella fully and slide your umbrella shaft through the umbrella receptacle so your bulbs are facing the inside of the umbrella.

To start using your lights locate the power cords provided in your kit. There will be one power cord for each light in your kit. Attach the power cord to the back of light head.

Please note you will also receive one sync cord for every light in your kit. You only need to use one sync cord while taking pictures as each light has built in slaves.

Before using your kit enjoy the FREE Educational DVD provided that walks you through how to operate your digital camera, step-by-step set up of your kit, lighting and posing, along with many tips and techniques to enhance your images.
